## Features

Issue Number 32

### Language Development

*Parsing is a very important tool for command processing and parsing the input for a calculator is an easily understood example.*

by Paul Mann ..... 7

### Designing Operating Systems

*Some of the steps and considerations involved in designing a ROM based operating system.*

by Clark Calkins ..... 18

### Advanced CP/M

*Boosting system performance with fast disk resets, and optimizing sieve performance with tightly coded assembly language.*

by Bridger Mitchell ..... 20

### Systematic Elimination of MS-DOS Files

*An in-depth look at how the FCB works in conjunction with DOS, plus a program to delete root directory entries.*

by Dr. Edwin Thall ..... 26

### WordStar 4.0 on Generic MS-DOS Systems

*Version 4.0 can be patched to work with ASCII terminals for non-compatible systems (such as my AMPRO L.B. '186) or with remote terminals.*

by Phil Hess ..... 32

### K-OS ONE and the SAGE 68000

*Evaluating how the hardware design affects the BIOS requirements, and establishing the software flow diagrams.*

by Bill Kibler ..... 34

Issue Number 33

### Data File Conversion

Data files received from other people are often in the wrong format and must be converted. Here's an example written in C.

by Art Carlson..... 6

### Advanced CP/M

Information on ZCPR3PLUS, and how to write self relocating Z80 code.

by Bridger Mitchell..... 9

### Data Base

This primer on data bases and information processing is the start of a regular section.

by Art Carlson..... 16

### SCSI for the S-100 Bus

SCSI is the preferred port for peripherals, and this is an example of an S-100 implementation.

by John C. Ford..... 17

### Use a Mouse on Any Hardware

Mice aren't limited to the Macintosh or PC, here's how to add one to your Z80 system.

by Richard Rodman..... 24

### Systematic Elimination of MS-DOS Files

This second part covers subdirectories and extended DOS services.

by Edwin Thall..... 27

### The ZCPR3 Corner

Revisions to ARUNZ, how WordStar Release 4 (CP/M version) works with Shells and how to patch it.

by Jay Sage..... 32

September / October 1988

### Developing a File Encryption System

*How to scramble data, and how to develop your own customized encryption/password system.*

*by Dr. Edwin Thall..... 4*

### Data Base

*Some of the factors to be considered when choosing the data base management system.*

*by Art Carlson..... 11*

### A Simple Multitasking Executive

*Designing an embedded controller multitasking system, with code examples for the Z80 and NS32.*

*by Richard Rodman..... 12*

### CP/M's Magical IOBYTE

*A fully implemented IOBYTE is very useful. Here's how to do it with time and space saving tables.*

*by Donald C. Kirkpatrick..... 16*

### ZCPR3 Corner

*More on relocatable code, PRL files, ZCPR34, and Type-4 programs.*

*by Jay Sage..... 20*

### New Microcontrollers Have Smarts

*Chips with BASIC or Forth in ROM make these chips easy to program without having to use assembly language.*

*by R.E. McCain..... 26*

### Advanced CP/M

*Operating system extensions to BDOS and BIOS, RSXs for CP/M 2.2.*

*by Bridger Mitchell..... 30*

### Macintosh Data File Conversion in Turbo Pascal

*Many people don't realize that you can write a plain vanilla computer program on the Mac. Here's an example in Turbo Pascal.*

*by Tim McDonough..... 38*

### All This and Modula-2

*A Pascal-like alternative with scope and parameter  
passing controls for reusable modules and  
multiprogrammer projects.*

by Dave Moore..... 4

### A Short Course in Source Code Generation

*Disassembling 8086 software to produce  
modifiable assembly language source code.*

by Clark A. Calkins..... 9

### Real Computing

*The National Semiconductor NS32032 is an  
attractive alternative to the Intel and Motorola  
CPUs.*

by Richard Rodman..... 16

### S-100 EPROM Burner

*S-100 is quiet, but not dead. Here is another  
project for S-100 hardware hackers.*

by Michael Broschat..... 18

### Advanced CP/M

*An up-to-date DOS for CP/M including  
datestamping, plus details on file structure and  
formats.*

by Bridger Mitchell..... 19

### REL-Style Assembly Language for CP/M and Z-System

*Part 1: Choose Your Weapons. Selecting your  
CP/M assembler, linker, and debugger.*

by Bruce Morgan..... 27

### ZCPR3 Corner

*How shells work, cracking code, and remaking  
WordStar 4.0.*

### Information Engineering

The first part of a series on using the information in our databases.

by C. Thomas Hilton..... 5

### Modula-2

Good reference books are hard to locate. This list will help you find the ones you need.

by Dave Moore, Alex Pournelle, Barry Workman..... 8

### Temperature Measurement and Control

An inexpensive, automated, temperature measuring interface for agricultural applications of computers.

by Mathew K. Rogoyski..... 11

### ZCPR3 Corner

Z-System associates, Z-Nodes, Z-Plan for computer clubs, Amstrad computer, and ZFILER.

by Jay Sage..... 21

### Real Computing

National Semiconductor NS32032, hardware for the experimenter, CPUs in the series, and software options.

by Richard Rodman..... 27

### SPRINT

This may be the best choice for a professional word processor.

by C. Thomas Hilton..... 29

### ZCPR3's Named Shell Variables

Using shell variables and the shell stack.

by Rick Charnes..... 32

### REL-Style Assembly Language for CP/M and Z-System

Part 2: Segments, EXTRN, and relieving programming drudgery.

by Bruce Morgan..... 38

### Advanced CP/M

Environmental programming and a tale of too hasty system design.

by Bridger Mitchell..... 40

**Subscription rates**—\$18 one year (6 issues), or \$32 two years (12 issues) in the U.S., \$24 one year surface in other countries. Inquire for air rates. All funds must be in U.S. dollars on a U.S. bank.

Send subscription, renewals, address changes, or advertising inquiries to: The Computer Journal, 190 Sullivan Crossroad, Columbia Falls, MT 59912, phone (406) 257-9119.

## Registered Trademarks

It is easy to get in the habit of using company trademarks as generic terms, but these trademarks are the property of the respective companies. It is important to acknowledge these trademarks as their property to avoid their losing the rights and the term becoming public property. The following frequently used trademarks are acknowledged, and we apologize for any we have overlooked.

Apple II, II+, IIc, IIe, Lisa, Macintosh, DOS 3.3, ProDos; Apple Computer Company. CP/M, DDT, ASM, STAT, PIP; Digital Research. DateStamper, BackGrounder II, Dos Disk; Plu\*Perfect Systems. Clipper, Nantucket; Nantucket, Inc. dBase, dBASE II, dBASE III, dBASE III Plus, dBASE IV; Ashton-Tate, Inc. MBASIC, MS-DOS, Windows, Word; MicroSoft. WordStar; MicroPro International. IBM-PC, XT, and AT, PC-DOS; IBM Corporation. Z80, Z280; Zilog Corporation. Turbo Pascal, Turbo C, Paradox; Borland International. HD64180; Hitachi America, Ltd. SB180; Micromint, Inc.

Where these and other terms are used in The Computer Journal, they are acknowledged to be the property of the respective companies even if not specifically acknowledged in each occurrence.

### Registered Trademarks

It is easy to get in the habit of using company trademarks as generic terms, but these trademarks are the property of the respective companies. It is important to acknowledge these trademarks as their property to avoid their losing the rights and the term becoming public property. The following frequently used trademarks are acknowledged, and we apologize for any we have overlooked.

Apple II, II+, IIC, IIE, Lisa, Macintosh, ProDos; Apple Computer Company CP/M, DDT, ASM, STAT, PIP; Digital Research. DateStamper, BackGrounder II, Dos Disk; Pli\*Perfect Systems. Clipper, Nantucket; Nantucket, Inc. dBase, dBASE II, dBASE III, dBASE III Plus, dBASE IV; Ashton-Tate, Inc. MBASIC, MS-DOS, Windows, Word; MicroSoft. WordStar; MicroPro International. IBM-PC, XT, and AT, PC-DOS; IBM Corporation. Z80, Z280; Zilog Corporation. Turbo Pascal, Turbo C, Paradox; Borland International. HD64180; Hitachi America, Ltd. SB180; Micromint, Inc.

Where these and other terms are used in *The Computer Journal*, they are acknowledged to be the property of the respective companies even if not specifically acknowledged in each occurrence.

It is easy to get in the habit of using company trademarks as generic terms, but these trademarks are the property of the respective companies. It is important to acknowledge these trademarks as their property to avoid their losing the rights and the term becoming public property. The following frequently used trademarks are acknowledged, and we apologize for any we have overlooked.

Apple II, II+, IIc, IIe, Lisa, Macintosh, ProDos; Apple Computer Company. CPM, DDT, ASM, STAT, PIP; Digital Research. DateStamper, BackGrounder II, Dos Disk; Plu\*Perfect Systems. Clipper, Nantucket; Nantucket, Inc. dBase, dBASE II, dBASE III, dBASE III Plus, dBASE IV; Ashton-Tate, Inc. MBASIC, MS-DOS, Windows, Word; MicroSoft. WordStar, MicroPro International. IBM-PC, XT, and AT, PC-DOS; IBM Corporation. Z80, Z280; Zilog Corporation. Turbo Pascal, Turbo C, Paradox; Borland International. HD64180; Hitachi America, Ltd. SB180; Micromint, Inc.

Where these and other terms are used in *The Computer Journal*, they are acknowledged to be the property of the respective companies even if not specifically acknowledged in each occurrence.

### Registered Trademarks

It is easy to get in the habit of using company trademarks as generic terms, but these trademarks are the property of the respective companies. It is important to acknowledge these trademarks as their property to avoid their losing the rights and the term becoming public property. The following frequently used trademarks are acknowledged, and we apologize for any we have overlooked.

Apple II, II+, IIc, IIe, Lisa, Macintosh, ProDos; Apple Computer Company. CP/M, DDT, ASM, STAT, PIP; Digital Research. DateStamper, BackGrounder II, Dos Disk; PlusPerfect Systems. Clipper, Nantucket; Nantucket, Inc. dBase, dBASE II, dBASE III, dBASE III Plus, dBASE IV; Ashton-Tate, Inc. MBASIC, MS-DOS, Windows, Word; MicroSoft. WordStar, MicroPro International. IBM-PC, XT, and AT, PC-DOS; IBM Corporation. Z80, Z280; Zilog Corporation. Turbo Pascal, Turbo C, Paradox; Borland International. HD64180; Hitachi America, Ltd. SB180; Micromint, Inc.

Where these and other terms are used in *The Computer Journal*, they are acknowledged to be the property of the respective companies even if not specifically acknowledged in each occurrence.
